(54) ELECTROPHOTOGRAPHIC PHOTORECEPTOR

(57)Abstract:

PROBLEM TO BE SOLVED: To enhance abrasion resistance without deteriorating the merit of the electrophotographic organic photoreceptor by using a a combination of a specified naphthalene type polycarbonate copolymer as a binder resin with a specified antioxidant.

SOLUTION: The binder resin of this organic photoreceptive layer contains the naphthalene type polycarbonate copolymer comprising repeating units represented by formulae I and II in a molar ratio of the repeating units of formula II to the sum of those of formulae I and II of $0.01 \le [i-b]/[[i-a]+[i-b]] \le 0.5$, and at least one kind of phenolic antioxidant represented by formula III and in formulae I–III, Y is a -O-, -CO-, -S- atom or atomic group or the like; each of R51–R54 is, independently, an H atom or the like; each of (a) and (b) in an integer of 0-4; each of (c) and (d) is an integer of 0-3; each of R1–R3 is an H atom or the like; (n) is an integer of 1-3; and [i-a] and [i-b] are the total numbers of the repeating units of formula I and formula II, respectively.
